7. Write a Pandas program to create a Pivot table and find the maximum and minimum sale value of the items.

AIM: To Write a Pandas program to create a Pivot table and find the maximum and minimum sale value of the items.

PROCEDURE:

- Import the Pandas library.
- Read the `sales.csv` file into a DataFrame.
- Display the sales records.
- Create a Pivot Table using the `Item` column as the index.
- Find the maximum and minimum `SaleValue` using `aggfunc`.
- Display the Pivot Table.

OUTPUT:

The screenshot shows a Jupyter Notebook with the following code in the cell:

```

import pandas as pd
sales = pd.read_csv("sales.csv")
# Display complete data
print("Sales Details")
print(sales)
# Create Pivot Table

```

The output of the code is displayed below the cell:

```

D:\Desktop\Query_Processing_Lab\python experiment7.py
Sales Details

```

	Item	Category	SaleValue
0	Laptop	Electronics	55000
1	Mobile	Electronics	25000
2	Laptop	Electronics	60000
3	Chair	Furniture	5000
4	Chair	Furniture	6500
5	Table	Furniture	9000
6	Pen	Stationery	50
7	Pen	Stationery	60
8	Notebook	Stationery	120
9	Notebook	Stationery	150

Pivot Table (Maximum and Minimum Sale Value)

	Item	max SaleValue	min SaleValue
Chair	Chair	6500	5000
Laptop	Laptop	60000	55000
Mobile	Mobile	25000	25000
Notebook	Notebook	150	120
Pen	Pen	60	50
Table	Table	9000	9000

RESULT: Thus, the Pandas program to create a Pivot Table and find the maximum and minimum sale value of the items was executed successfully, and the required output was obtained.

8. Write a Pandas program to create a Pivot table and find the item wise unit sold.

AIM: To Write a Pandas program to create a Pivot Table and find the item-wise units sold.

PROCEDURE:

- Import the Pandas library.
- Read the `sales_units.csv` file into a DataFrame.
- Display the sales records.
- Create a Pivot Table using `Item` as the index.
- Calculate the total units sold for each item using the `sum` aggregation function.
- Display the Pivot Table.

OUTPUT:

RESULT: Thus, the Pandas program to create a Pivot Table and find the item-wise units sold was executed successfully, and the required output was obtained
