11. Create a dataframe of ten rows, four columns with random values. Convert some values to nan values. Write a Pandas program which will highlight the nan values.

AIM: To Create a dataframe of ten rows, four columns with random values. Convert some values to nan values. Write a Pandas program which will highlight the nan values.

PROCEDURE:

- Import the Pandas and NumPy libraries.
- Generate a DataFrame with random values.
- Replace selected values with **NaN**.
- Display the DataFrame.
- Define a function to identify NaN values.
- Apply the highlighting style to NaN values.
- Save the styled DataFrame as an HTML file.
- Open the HTML file to view the highlighted NaN values.

OUTPUT:

```
26
27 # Apply styling
28 styled_df = df.style.map(highlight_nan)
29
30 # Save output as HTML
31 styled_df.to_html("experiment11_output.html")
32
33 print("\nStyled DataFrame saved as 'experiment11_output.html'")
```

Styled DataFrame saved as 'experiment10_output.html'

D:\Desktop\Query_Processing_Lab>python experiment11.py

Original DataFrame

	A	B	C	D
0	91	16.0	96.0	29.0
1	91	10.0	NaN	76.0
2	23	72.0	35.0	97.0
3	41	86.0	91.0	27.0
4	84	NaN	63.0	17.0
5	8	99.0	7.0	27.0
6	14	76.0	59.0	26.0
7	4	75.0	76.0	NaN
8	70	84.0	59.0	95.0
9	33	11.0	7.0	76.0

Styled DataFrame saved as 'experiment11_output.html'

D:\Desktop\Query_Processing_Lab>[]

RESULT: Thus, the Pandas program to create a DataFrame with random values, convert some values to NaN, and highlight the NaN values was executed successfully, and the required output was obtained.

12. Create a dataframe of ten rows, four columns with random values. Write a Pandas program to set dataframe background Color black and font color yellow.

AIM: To Create a dataframe of ten rows, four columns with random values. Write a Pandas program to set dataframe background Color black and font color yellow.

PROCEDURE:

- Import the Pandas and NumPy libraries.
- Generate a DataFrame with 10 rows and 4 columns of random values.
- Display the DataFrame.
- Apply black background and yellow font color using `set_properties()`.
- Save the styled DataFrame as an HTML file.
- Open the HTML file in a web browser to view the styled DataFrame.

OUTPUT:

```
19         "color": "yellow"
20     }
21 )
22
23 # Save the styled DataFrame as HTML
24 styled_df.to_html("experiment12_output.html")
25
26 print("\nStyled DataFrame saved as 'experiment12_output.html'")
```

10:10:52.139 > Is updating: null

D:\Desktop\Query_Processing_Lab>python experiment12.py

Original DataFrame

	A	B	C	D
0	5	63	91	16
1	62	24	45	51
2	9	29	5	98
3	32	78	2	40
4	4	89	56	4
5	85	46	4	2
6	23	32	49	48
7	74	17	51	86
8	37	18	33	11
9	61	48	2	87

Styled DataFrame saved as 'experiment12_output.html'

D:\Desktop\Query_Processing_Lab>

RESULT: Thus, the Pandas program to create a DataFrame with random values and set the background color to black and the font color to yellow was executed successfully, and the required styled output was obtained.
