3. Write a Pandas program to display the details of jobs in descending sequence on job title.

AIM: To Write a Pandas program to display the details of jobs in descending sequence on job title.

PROCEDURE:

1. Import the Pandas library.
2. Read the `jobs.csv` file into a DataFrame.
3. Display all job records.
4. Sort the records by the `JobTitle` column in descending order.
5. Display the sorted job details.

OUTPUT:

The screenshot shows a Jupyter Notebook interface with a file explorer on the left containing `employees.csv`, `experiment1.py`, `experiment2.py`, `experiment3.py`, `job_history.csv`, and `jobs.csv`. The main editor displays the following code in `experiment3.py`:

```
10 # Sort the jobs in descending order based on JobTitle
11 sorted_jobs = jobs.sort_values(by="JobTitle", ascending=False)
12
13
14 print("\nJobs in Descending Order of Job Title")
15 print(sorted_jobs)
```

The terminal output shows the execution of the program, displaying the job details and the sorted results:

```
EmployeeID
101    2
103    3
105    2
dtype: int64

Job Details
  JobID  JobTitle  MinSalary  MaxSalary
0  J101  Developer    30000    60000
1  J102    Manager    50000    90000
2  J103    Analyst    35000    65000
3  J104  HR Executive    25000    50000
4  J105    Tester    20000    55000
5  J106  Data Scientist    60000   120000

Jobs in Descending Order of Job Title
  JobID  JobTitle  MinSalary  MaxSalary
4  J105    Tester    20000    55000
1  J102    Manager    50000    90000
3  J104  HR Executive    25000    50000
0  J101  Developer    30000    60000
5  J106  Data Scientist    60000   120000
2  J103    Analyst    35000    65000
```

RESULT: Thus, the Pandas program to display the details of jobs in descending sequence based on the Job Title was executed successfully, and the required output was obtained.

4. Write a Pandas program to create a line plot of the historical stock prices of Alphabet Inc. between two specific dates.

AIM: To Write a Pandas program to create a line plot of the historical stock prices of Alphabet Inc. between two specific dates.

PROCEDURE:

- Import the Pandas and Matplotlib libraries.
- Read the `alphabet_stock.csv` file.
- Convert the `Date` column into datetime format.
- Filter the records between the specified dates.
- Plot the `Date` against the `Close` price using a line graph.
- Add the graph title, axis labels, and grid.
- Display the line plot.

OUTPUT:

RESULT: Thus, the Pandas program to create a line plot of the historical stock prices of Alphabet Inc. between two specific dates was executed successfully, and the required graph was obtained.
