

SET -10

19. Write a Pandas program to display the dimensions or shape of the World alcohol consumption dataset. Also extract the column names from the dataset.

AIM: To Write a Pandas program to display the dimensions or shape of the World alcohol consumption dataset. Also extract the column names from the dataset.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment19.py
Shape of the dataset:
(10, 5)

Number of rows: 10
Number of columns: 5

Column names:
Index(['Year', 'WHO_Region', 'Country', 'Beverage_Type', 'Display_Value'], dtype='object')
```

RESULT: Thus, the Pandas program to display the dimensions/shape and extract the column names of the World Alcohol Consumption dataset was executed successfully.

20. Write a Pandas program to find the index of a given substring of a DataFrame column.

AIM: To Write a Pandas program to find the index of a given substring of a DataFrame column.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment20.py
Original DataFrame
  Name Department
0  Arun         CSE
1  Priya        ECE
2  Kiran         CSE
3  Rahul         IT
4  Anitha        CSE

Index of substring 'ri':
0  -1
1   1
2  -1
3  -1
4  -1
Name: Name, dtype: int64
```

RESULT: Thus, the Pandas program to find the index of a given substring in a DataFrame column was executed successfully.
