37. Write a Pandas program to create a dataframe from a dictionary and display it.

AIM: To Write a Pandas program to create a dataframe from a dictionary and display it.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment37.py
DataFrame:
   Name  Age Department
0  Arun   20         CSE
1  Priya  21         ECE
2  Kiran  19         IT
3   Anu   22         CSE
```

RESULT: Thus, the Pandas program to create a DataFrame from a dictionary and display it was executed successfully .

38. Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels.

AIM: To Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment38.py
DataFrame:
      Name  Age  Marks
Student1  Arun   20    85
Student2  Priya  21    90
Student3  Kiran  19    78
Student4   Anu   22    88
```

RESULT: Thus, the Pandas program to create and display a DataFrame from dictionary data with index labels was executed successfully.
