

SET -20

39. Write a Pandas program to get the first 3 rows of a given DataFrame.

AIM: To Write a Pandas program to get the first 3 rows of a given DataFrame.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment39.py
Original DataFrame:
   Name  Age  Marks
0  Arun   20    85
1  Priya  21    90
2  Kiran  19    78
3  Rahul  22    88
4  Anitha 20    92

First 3 rows:
   Name  Age  Marks
0  Arun   20    85
1  Priya  21    90
2  Kiran  19    78
```

RESULT: Thus, the Pandas program to get the first 3 rows of the given DataFrame was executed successfully.

40. Write a Pandas program to select the 'name' and 'score' columns from the given DataFrame.

AIM: To Write a Pandas program to select the 'name' and 'score' columns from the given DataFrame.

OUTPUT:

```
D:\Desktop\Query_Processing_Lab>python experiment40.py
Original DataFrame
   name  score  age
0  Arun    85   20
1  Priya   90   21
2  Kiran   78   20
3  Rahul   88   22
4  Anitha  92   21

Name and Score columns:
   name  score
0  Arun    85
1  Priya   90
2  Kiran   78
3  Rahul   88
4  Anitha  92
```

RESULT : Thus, the Pandas program to select the **name** and **score** columns from the given DataFrame was executed successfully.
